"Sequence and structure of the nucleolin promoter in rodents:
characterization of a strikingly conserved CpG island.";
Gene 68:73-84(1988).
-!- FUNCTION: NUCLEOLIN IS THE MAJOR NUCLECLAR PROTEIN OF GROWING
ENTARANCYIC CELLS. IT IS FOUND ASSOCIATED WITH INTRANUCLEOLAR
CHROMATIN AND PRERIBOSOMAL PRATICLES. IT INDUCES CHROMATIN
DECONDENSATION BY BINDING TO HISTONE H1. IT IS THOUGHT TO PLAY A
ROLE IN PRE-RRA TRANSCRIPTION AND RIBOSOME ASSEMBLY.
-!- SUBCELLULIAR LOCATION: Nuclear; nucleolar.
                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

Reversible dissociation of thiolate ligands from molybdenum in an enzyme of the dimethyl sulfoxide reductase family.";

ENCYMENTON: Parminal reductase during anaerobic growth on various sulfoxide and n-oxide compounds.

-!- COMPANTATIO FATIVATIO*: Reduces various N-oxide and sulfoxide compounds including trimethylamine N-oxide and sulfoxide compounds including trimethylamine. N-oxide and sulfoxide dinucleotide (MGD) groups per subunit.

-!- SUBGNIT: Monomer (By similarity)

-!- SUBCELLUAR LOCATION: Periplasmic.
-!- SUBCELLUAR LOCATION: Periplasmic.
-!- FPTW: Predicted to be exported by the Tat system. The position of the signal peptide cleavage has been experimentally proven.
-!- SIMILARITY: BELONGS TO THE PROKARYOTIC MOLYBDOPTERIN-CONTAINING OXIDOREDUCTASE FAMILY.

"Two functional thioredoxins containg redox-senseltive vicinal
dithiols from the Chlamydomonas outer dynein arm.",
J. Biol. Chem. 271:6283-6291(1996).
-!- FUNCTION. MAY BE INVOLVED IN REGULATING THE REDOX STATE OF
FUNCTIONALLY IMPORTANT THIOL GROUPS WITHIN DYNEIN.
-!- SUBUNIT: CONSISTS OF AT LEAST 3 HEAVY CHAINS (ALPHA, BETA AND
GAMMA), 2 INTERMEDATE CHAINS AND 8 LIGHT CHAINS.
-!- SIMILARITY: BELONGS TO THE THIOREDOXIN FAMILY.
                                                                                                             01-NOV-1997 (Rel. 35, Created)

-!- FUNCTION: THIS PROTEIN IS A COMPOUNT OF THE ACETYL COENZYME A

CARBOXYLASE COMPLEX; FIRST, BIOTIN CARBOXYLASE CATALYZES THE

CARBOXYLATION OF THE CARRIER PROTEIN AND THEN THE TRANSCARBOXYLASE

TRANSFERS THE CARBOXYL GROUP TO FORM MALONYL-COA.

-!- PATHWAY: Long-chain fatty acid biosynthesis; first step.
-!- SUBUNIT: Homodimer (By similarity).

Y IN ACO-REPRESOR PROMENT REPRESOR OF GENES THAT REQUIRE A BHLH PROTEIN FOR THEIR TRANSCRIPTION. REPRESSION REQUIRES FORMATION OF A COMPLEX WITH A CO-REPRESSOR PROTEIN (GROUCHO).

YOUNG A CO-REPRESSOR PROTEIN (GROUCHO).

YOUNG A PARTICULAR TYPE OF BASIC DOMAIN (PRESENCE OF A HELIX-INVERRUPTION FROLING).

YELLOWAIN: THE CARONYL-TERMINAL WRPW MOTIF IS A TRANSCRIPTIONAL CARONALN NECESSARY FOR THE INTERACTION WITH GROUCHO, A TRANSCRIPTIONAL CO-REPRESSOR RECRUITED TO SPECIFIC TARGET DNA BY TRANSCRIPTION FACTORS. Goldschmidt-Clermont M., Rahire M.;
"Sequence, evolution and differential expression of the two genes
encoding variant small subunits of ribulose bisphosphate
carboxylase/oxygenase in Chlamydomonas reinhardtii.";
J. Mol. Biol. 191:421-432(1986)
-:- FONCTION: RuBisCo catalyzes two reactions: the carboxylation of D-
-:- FONCTION: RuBisCo catalyzes two reactions: the carboxylation of D-
-:- FONCTION: Johnsphosphate, the primary event in photosynthetic
carbon dioxide fixation, as well as the oxidative fragmentation of
the pencose substrate in the photorespiration process. Both
reactions occur simultaneously and in competition at the same
active site.

SEQUENCE OF 1-42 AND 150-195 FROM N.A.
STRAIN-cv. Columbia;
RAYNAI M., Grellet F., Laudie M., Meyer Y., Cooke R., Delseny M.;
Submitted (CCT-1992) to the EMBL/GenBank/DDBJ databases.
-! SIMILARITY: BELONGS TO THE LOP FAMILY OF RIBOSOMAL PROTEINS.
-! CAUTION: Ref. 1 sequence differs from that shown due to frameshifts in positions 134; 139 and 141:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             STRAIN=cv.
